**Sub: Demonstration of your Fire -fighting
Products / Systems**
Attn: Mr. Nalin Doshi,
Managing Director.

Dear Mr. Doshi,

I sincerely thank you for the courtesy extended to me during my visit to your Baroda works for witnessing the demonstration of the new fire-fighting products and systems developed by you, in the company of officials from IOC, BPCL, ONGC, IPCL, IFFCO, etc.

I am happy to state that the products and systems performed very well during the demonstration which was very much appreciated by all. The demonstrated products performed as per the design parameters you had described before the demonstration.

I have no doubt that these products/systems can enhance the fire-fighting strength of any refinery or petrochemical complex. The DCP and foam based systems, developed by you for floating roof tanks, can be considered for replacing the existing halon based systems which need to be phased out gradually. The 4-in-1 monitors and the remote-controlled monitors were quite innovative and should prove very popular.

I commend the excellent efforts put in by you and your team members for developing these products. I have forwarded the details of these products to the F&S Dept of our Bombay and Visakh refineries for further action.

Thanking you once again and with warm regards,

(S.G. SUBRAMONEY)
