### To Whom So Ever It May Concern

Undersigned visited "The Institute of Fire Safety & Disaster Management (IFSDM)" at **POR Vadodara**, to witness the Fire Fighting training facility developed recently. First of all I would like to convey my thanks for inviting me for the same. Further I would like to congratulate the management of The Institute of Fire Safety & Disaster Management (IFSDM) for setting up such facilities at Vadodara.

As you are aware that technological advances in industries, have multiplied the hazards to the operating personnel in the form of complex process & application of hazardous chemicals. If procedures and practices are not followed properly, there can be accidents, fires, explosions, which may cause serious damage to property and human life. For such type of industries functional as well as fire safety training of the personnel plays an important role. Therefore such type of institute may be a good opportunity for such industries, to get their employees trained in latest Fire Fighting techniques.

Undersigned also witnessed the demonstration of the "Metallic tube type linear heat detection cum fire extinguishing system" for the protection of S V Station. The system needs further detailed study with respect to specific requirement.

I once again congratulate you for setting up such type of facilities.

With Regards

*Dharma*
